EXPERIENCE

Full Stack Engineer

SaveJobs

Feb '25 — Present

South Korea (Remote)

I'm currently working at SaveJobs, a product-based company, as a full-stack engineer. We're building a labor management system to monitor ships, ongoing work, and worker performance. I use the Next.js framework to create user-friendly and responsive interfaces. I also integrate backend APIs and help manage client requirements to ensure the product meets their needs

Software Engineer

CodeTrade.io

Jan '23 — Sep '24

Jaipur, India

In my first role, I worked as a full-stack developer, responsible for building and maintaining web applications using ASP.NET Core MVC and Angular. I developed both the user-facing interface and the server-side logic, integrated APIs, and managed database operations using SQL Server. I also ensured the websites were responsive, user-friendly, and kept up-to-date with the latest content.

SKILLS

Framework Angular(17), Asp.net Core (6.0, 7.0), Next js, React, ASP.NET MVC

Database MSSQL Server 2015, 16, 18, MySQL, Prisma, PostgreSQL

Languages C# ,C++ , JavaScript, Typescript, HTML, CSS

EDUCATION

MCA – Master of Computer Application, JECRC University (GPA: 8.9)

2021 — 2023

Jaipur, India

BCA – Bachelor of Computer Application, Mohanlal Sukhadia University (GPA: 8.0)

2018 — 2021

Udaipur, India

PROJECTS

Labor Management System, SaveJobs

Feb '25 — Present

South Korea

- At SaveJobs, I'm working on a Labor Management System designed to monitor ship-related tasks, worker performance, and work schedules. This system helps companies track ongoing work, manage teams, and analyze productivity.

My responsibilities include:

- Building responsive, user-friendly interfaces based on client requirements
- Integrating backend APIs into the frontend
- Managing database interactions
- Implementing Syncfusion Gantt charts to schedule and display work records
- Ensuring smooth performance across all devices

Commercial Risk Management, CodeTrade.io

Feb '24 — Sep '24

Jaipur, India

- Developed a robust SaaS-based application tailored for managing and monitoring legal activities between clients and organizations.

The system supports a multi-tenant architecture, allowing each tenant to manage multiple users independently, with dedicated workspaces.

Integrated major modules including master data (customer, supplier, site, consultant), leads, tasks, and opportunity management, ensuring comprehensive tracking of business processes.

Applied complex business rules to ensure seamless execution of legal workflows and compliance tracking, customized to fit each tenant's needs.

Reporting Management System, CodeTrade.io

Sep '23 — Jan '24

Jaipur, India

- Developed a comprehensive Report Management System aimed at generating Q-score reports for actors, celebrities, and sports personalities.

Implemented robust database architecture to efficiently store and manage millions of incoming data points from the website.

Designed a user-friendly interface to seamlessly fetch data from the database and generate customizable reports in various formats.
